Abstract not available for JP 2007529972 (T)

Abstract of corresponding document: **WO 2005099211 (A1)**

Subcarrier phase rotation is implemented in an OFDM transmitting apparatus to overcome problems such as, for example, non-frequency selective multipath fading. In at least one embodiment, subcarrier phase rotation is practiced in an OFDM system implementing multiple input multiple output (MIMO) techniques.
